### Testprocedures/References

#### Sampling

- Machine for e-cigarettes aerosol generation and recording for routine analysis terms and standard conditions (draft DIN Standards Committee for Food and Agricultural Products NA057-04-01-05 AK)
- Preparations for inhalation, aerodynamic assessment (PharmEur 2.9.18)

#### Analytics

- Determination of aldehydes and ketones in air via reaction with 2,4-dinitrophenylhydrazine, separation and detection of the derivative method developed by Waters
- Determination of nicotine content by HPLC / UV method , method developed by BioChem Laboratory for biological and chemical analytics
- Determination of metals by AAS/GTT, method developed by Techpharm GmbH or ICP/MS DIN EN ISO 17294-2 / DIN 38406-1

In accordance with DIN-EN-ISO 9001: 2015 and 17025: 2005 samples were taken and tested by qualified laboratories by GMP conditions.
